

Temporary Noise Solutions - Project Profile

Client: City of Bayswater
Site: Waves Recreation Centre
Location: Western Australia
Product: Soundex Noise Barrier Fencing Enclosure

The challenge: Mitigation of noise created by tile grinding and re-surfacing works. It was critical that the centre remained open during the works.

The solution: TNS supplied 50 metres of noise barrier fencing and all associated weights, couplings and braces. The grinding works were enveloped in noise barrier fencing, creating a visual and acoustic buffer between it and the public.

The result: The client was very pleased that the TNS solution enabled the site to remain open throughout the works. Without the noise barrier fencing, the works would have been limited to after-hours operation. This would have made the project more expensive and duration longer.
