

Temporary Noise Solutions - Project Profile

Client: Pilewest

Site: CBD

Location: Western Australia

Product: Soundex Noise Barriers

The challenge: Mitigation of noise created by a sheet-piling rig and associated construction equipment. The piling rig hammer was encased with a steel frame that was wrapped with the noise barriers.

The solution: Pilewest engaged TNS to supply 20 noise barriers. These were attached to a steel frame that was in turn attached to the piling rig.

The result: A distinct reduction in the noise created by this typically loud form of construction activity.
